TAZZARI GROUP

For the past three years the Tazzari Group has been taking on a new challenge: to create a totally innovative electric car. It runs on lithium batteries. It has an aluminum frame and its interior has been designed just like a Super Car. ZERO satisfies the growing demand to protect the environment in North America. ZERO has a range of 88 miles in Economy Mode. Electricity cost is 2-3 cents per miles. No maintenance or oil changes are required. ZERO is optimally suited for city drivers and any limited traffic areas which are becoming evermore frequent in major metropolitan centers all over the world. ZERO is the FIRST micro-car sold to the public with lithium batteries. That's why ZERO is the new status symbol. It is the perfect solution for those consumers interested in buying a vehicle with zero emissions for day-to-day use. ZERO is the response to congested and polluted cities. The TAZZARI-ZERO creates a "niche within a niche".

TAZZARI GROUP

*ZERO is the most innovative, sportive and fun to drive. ZERO is stylish and will be the most popular NEV to own amongst today's hip and professional up and comings who commute in our cities' most populated urban centers. ZERO does not aim to be the most sold car, but the best car sold on the market. The Motorsport inspired interior has been designed and realized completely in aluminum, in addition to a central motor and rear wheel drive train. You cannot wish for anything better. ZERO is a Super Micro-Car "Made in Italy". It is truly state of the art. We are passionate about its design and are proud to say that ZERO is the newest heir in the long line of sports cars. ZERO is assembled in Imola, a city located in the Emilia Romagna Region, the home of sports cars, such as Ferrari and Lamborghini. "Made in Italy" has a great value around the world and the **Tazzari is very proud to launch ZERO, a vehicle aligned to the Italian Automobile Heritage.***

KEY SPECIFICATIONS

Body type	2 door aluminum frame
Length	113.5"
Width	61"
Height	55"
Ground clearance	7.1"
Weight without/with batteries	882 lbs 1,195 lbs
Payload	430 lbs
Max Speed	25 Mph
Acceleration 0-25 Mph	< 5 seconds
Range	88 Miles
Luggage capacity	6 cu ft
Tires	175/55R15

BATTERY SYSTEM

Type	Li-Ion Fe
Capacity	160 Ah
Estimated battery life	50,000 miles
Number of batteries	24 (3.2V ea.)
Charging time	9hrs at 115V / 6.5hrs at 240V

MOTOR

Type	3-phase Asynchronous motor
Maximum torque peak	120 Foot Pound

STANDARD FEATURES

15" Anthracite alloy wheels
4 high-performance disc brakes with regenerative braking system
Electronic anti-theft with remote control and immobilizer
Radio with MP3 and CD player (Hi-Fi sound)
Electric Heating system
Eco-leather seats
Genuine leather steering wheel
LED tail lights - Rear fog lamp - Reversing lights
Standard battery charger (charge time: 9 hrs – single-phase power supply)
Cup holders
12V outlet (phone recharger – Max 50W)

OPTIONAL FEATURES

15" white gloss alloy wheels or
15" black matt alloy wheels
Window raiser – anti-panic device – disconnecting siren
Removable, venting ULTRAVIEW sunroof
Heating system for regions with sub-zero temperatures
Winter tires
Air conditioning

*All features and specifications are subject to change without notice prior to scheduled production start up.
